VANQUISH

CALCIUM CHLORIDE PELLETS

DIRECTIONS:

Use rubber gloves, a scoop, or a spreader when applying VANQUISH calcium chloride pellets. Spread at the rate of 2-4 oz. (1/4 - 1/2 cup) per sq. yd. Remove slush and water to prevent penetration of porous areas and cracks in the concrete, as continual thawing and freezing action can cause damage to poor quality concrete. Do not place product directly on or near vegetation as overapplication can cause damage. Proper entrance matting is recommended in high foot traffic areas. Overapplication may cause a slippery surface.

NOTICE:

Seller makes no warranty, expressed or implied, as to the results of the use of this product. Buyer assumes all risk of use, handling, and storing of this product whether in accordance with directions or not.

PRECAUTION:

VANQUISH calcium will not cause harm to properly mixed (air entrained), poured, finished, and dried concrete. Do not use on concrete less than 1 year old. VANQUISH will not chemically attack concrete, however, natural freeze/thaw cycles, as well as freeze/thaw cycles caused by deicing material, can cause damage to poor quality concrete. This product should not be used on precast concrete steps, precast masonry walks or steps, brick, exposed aggregate or on any questionable-quality concrete. This product should not be overapplied. Excessive amounts may cause surface flaking or scaling and increase the occurrence of freeze/thaw cycles. It is recommended to remove all water and slush resulting from the deicing process as removal will decrease the frequency of freeze/thaw cycles. Also, all deicing materials can cause damage to plants, vegetation, and lawns when it is placed directly on, or very near the vegetation itself. Vegetation damage is also more likely when deicing products are overapplied. Correct application rates should be used when placing the product on the concrete surface. It is not recommended to use VANQUISH on metal or wood surfaces. Also, avoid contact with products made of leather material.

FIRST AID:

VANQUISH calcium chloride pellets are not for use with food or drugs. If ingested, seek medical attention immediately and do not induce vomiting unless recommended by a physician. In the case of contact with the eye or eyes, flush the affected areas for a minimum of 15 minutes and seek medical attention if irritation persists.

WARNING:

May cause eye and skin irritation
Harmful if swallowed

Read precaution and
application instructions carefully

**KEEP OUT OF REACH
OF CHILDREN**

Not for drug or food use
Not for sale in California

STORAGE:

Tightly reseal the package after use. Any remaining calcium chloride pellets should be stored in an area of low humidity. Calcium chloride is hygroscopic and draws in moisture from the air. If stored in an area of mid to high humidity, water may pool at the base of the package which may cause damage to flooring or carpeting. It may also cause remaining product to harden and become difficult to spread.

DISPOSAL:

IN REFERENCE TO BOTH CONTAINER AND CONTENTS: Dispose of product or empty container in accordance with local, state, or federal regulations and laws. The recommended option for disposal of unused/uncontaminated product is to send it to a permitted, licensed landfill.

CONTAINS:

Calcium Chloride CAS #010043-52-4
